

INFORMATION BROCHURE · OCTOBER 2026

Klidně Doma

**Know how the day is going for the people you love.
No wristbands, no cameras, no fuss with technology.**

Quiet home monitoring for older people who live alone. We design it,
install it and look after it.

info@klidnedoma.cz

Their independence. The family's peace of mind.

We combine sensors in the home, alerts to your phone and a professional installation. Your parent lives life their own way; the family knows how the day is going.

1

Nothing to wear

No wristband or pendant, nothing to charge. A button around the neck only helps when the person has it on them and is able to press it. Our sensors sit on the wall and work on their own.

2

No cameras needed

The sensors record no images and no sound. They only notice that someone is moving or present. A camera is an optional extra — only where you want one.

3

The family stays informed

A son or daughter sees on their phone when there was last movement in the home and whether the equipment is connected. When a situation matches the agreed rules, the system gets in touch.

0

devices your parent has to wear or charge

1

morning is all the installation takes, nothing drilled into furniture

24/7

the rules watch the home around the clock, day and night

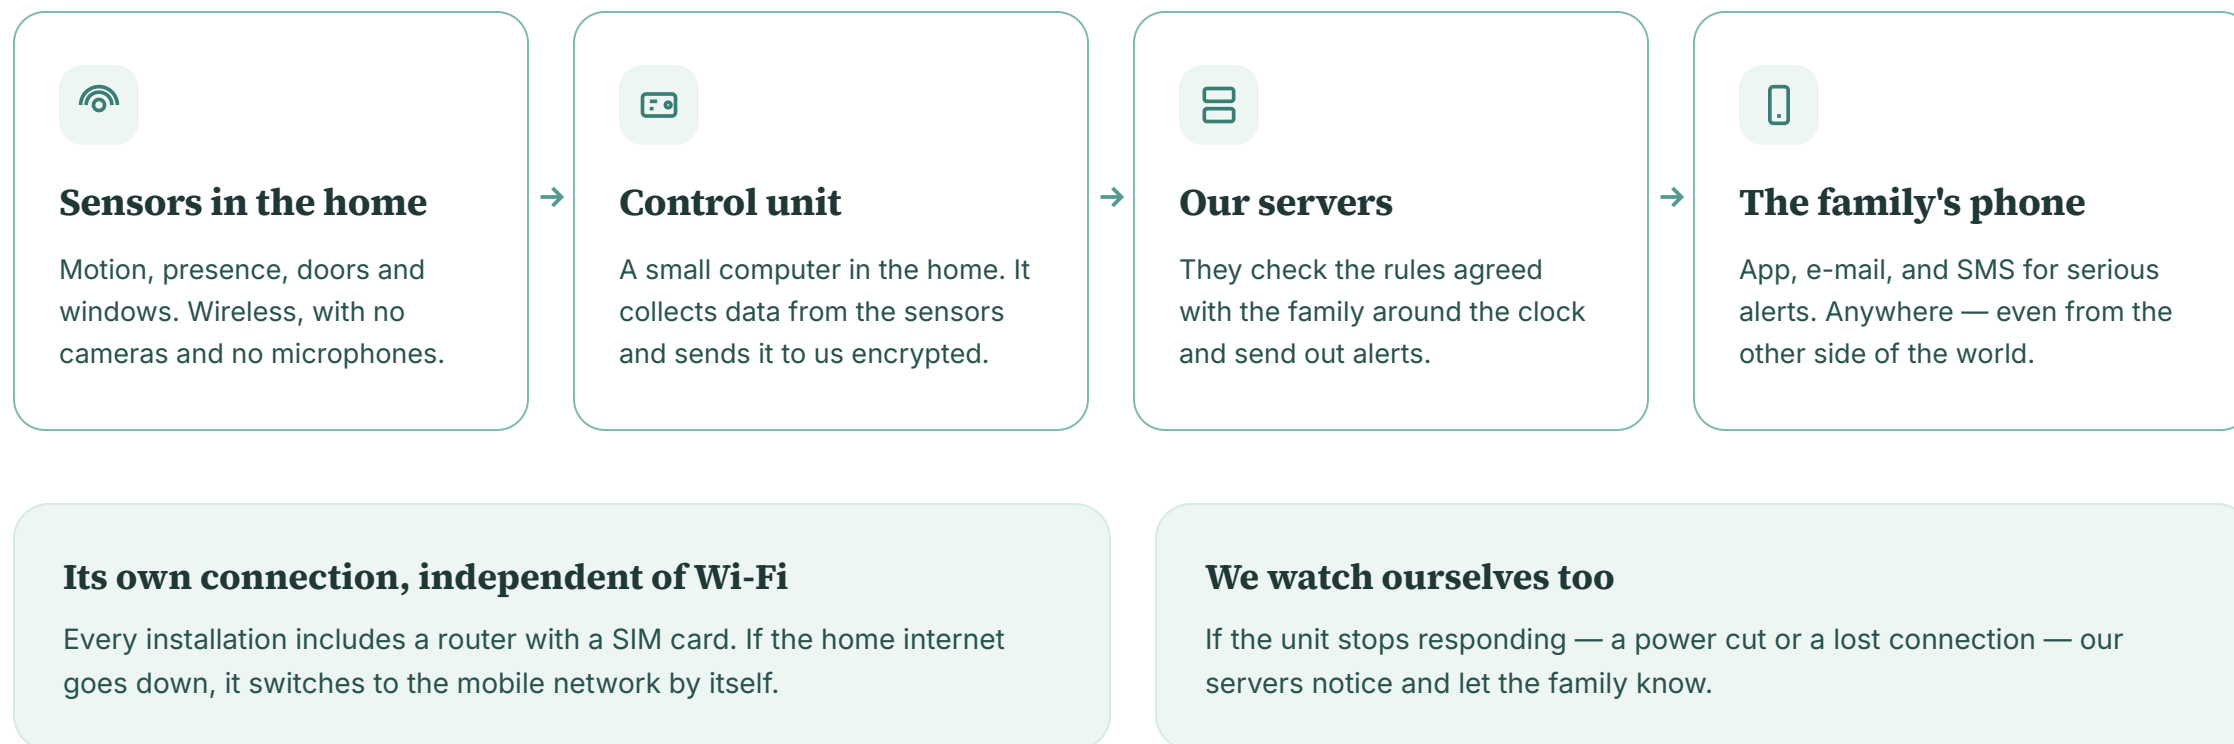

SIM

its own connection — no Wi-Fi needed in the home

Klidně Doma is a technology service. It does not replace medical, nursing or emergency care — it gives the family more information.

From a sensor in the room to the family's phone.

Four links in one chain. We watch every one of them — including whether the chain is complete.

One screen. No unnecessary detail.

The overview shows the last movement and the state of the equipment. An alert arrives only when a situation matches the rules we set up together with you.

- **No movement for a long time**

Nothing has moved in the home for longer than is usual for you. Also sent by SMS.

- **Water leak**

Water sensors in the bathroom and kitchen (Safety package).

- **Equipment care**

A low battery or a sensor that has stopped reporting.

- **Connection lost**

The unit has gone quiet — usually power or internet.

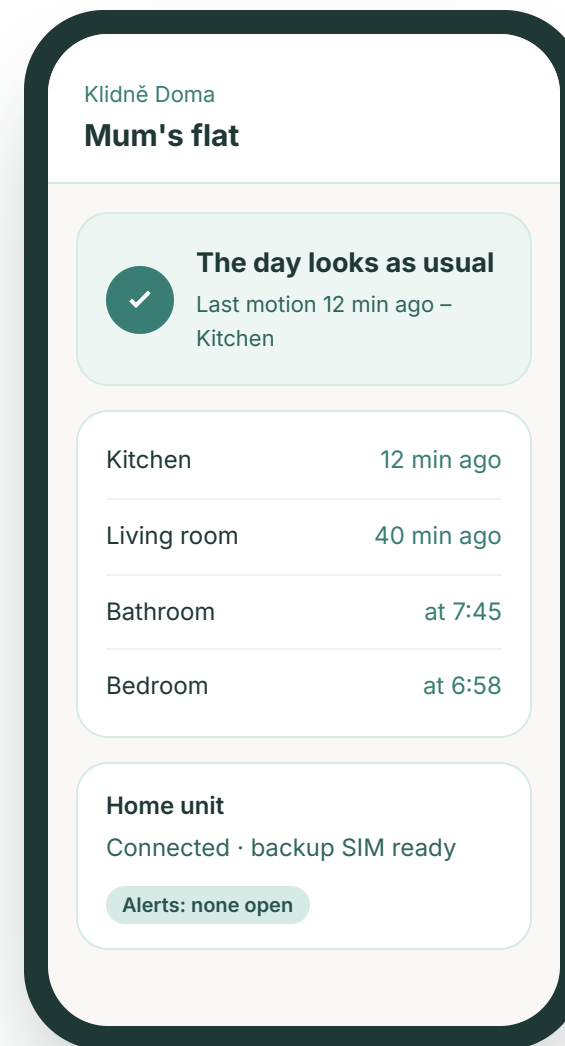

- **High room temperature**

A sensor reports a temperature above the safe limit.

- **Daily summary**

A short summary by e-mail once a day.

You grant and remove access to the app. Several family members can use it.

Illustrative app preview

The first question every family asks.

1

The home internet goes down

The router switches to its backup SIM card by itself and data keeps flowing over the mobile network. The family has nothing to do.

System keeps running

2

The power goes or the unit stops responding

Our servers notice within a few minutes and the family gets a message that the connection to the home is lost.

Family gets a message

3

Something needs fixing

We manage the unit remotely — updates and checks without a visit. A faulty sensor is replaced within 5 days.

We handle it

Their home, their way. Your peace of mind.

Four levels. Each builds on the one before.

Basic

I want to know the day went as usual.

- Control unit with a router and a SIM card
- Motion sensors in every room, the hallway and the bathroom
- A presence sensor where someone sits or lies for long
- Contacts on the bathroom and front doors

Safety

Plus a window left open in the frost, or water on the floor.

- Everything in Basic
- Contacts on the windows and room doors
- Water leak sensors in the bathroom and kitchen

Comfort

A night trip to the toilet with lights that come on by themselves.

- Everything in Safety
- Smart lights in the rooms, hallway and bathroom

View

We'd like to see who came to the door now and then.

- Everything in Comfort
- A camera at the front door — only where you want one

In every package

- Installation and setup by our technician at the home
- We set the alert rules together with you
- Web portal and mobile app for the family
- Alerts to your phone and by e-mail, SMS for serious ones
- Remote updates and care of the unit
- Personal support, a faulty sensor replaced within 5 days

We set the price for your home after a free visit. The offer is without obligation.

Built to last. And built to keep things private.

A

An open system

We run on the open standards Zigbee, Thread and Matter. You can add other devices that support them later — and the equipment stays usable even if you ever leave us.

B

Privacy first

The sensors capture no images and no sound. We store household data in the EU, and only the people you give access can see it. The family does not see every step — only what matters.

C

Professional management

We manage every unit over a secure remote connection: updates, checks and settings without a visit. No work for your parent or the family.

INSTALLATION

One morning

Nothing drilled into furniture, nothing knocked down.

CONNECTION

Its own router with a SIM

No Wi-Fi needed in the home.

SUPPORT

Personal, local

By phone and by e-mail.

The first steps are free. The offer comes last.

First we go through everything together. It commits you to nothing.

1

Phone call

We answer your questions
and find out what you
need.

FREE

2

Home visit

We come to see the home
and how you live in it.

FREE

3

3D scan of the home

We measure the space
with a laser (LiDAR) and
make an exact plan.

FREE

4

Proposed setup

We show where the
sensors go so no corner is
left blind.

FREE

5

Tailored offer

A setup made for your
home. Whatever can be
left out, we leave out.

NO OBLIGATION

The next step is a visit. Just call us or pick a date at klidnedoma.cz/en.

CONTACT

Thank you for your trust.

Get in touch whenever you like. We will find a visit date that suits you — the visit and the scan are free and without obligation.
